I would ask that the FCC reject the NAB's petition 04-160. XM satellite radio is a very useful tool I use in my livelihood to get updates on traffic and weather conditions for large cities that I may be traveling through or into.

I pay for this service and find it extremely helpful in my route planning decisions. I find it extremely difficult to find this information on local radio channels as you have to be too close to where you want the info about to change your planning if there are problems that you wish to avoid. Let the local stations broadcast this info for the local people who know where to tune. The NAB should not feel threatened by the service XM satellite radio is providing to its paying customers. Local stations are not impacted by this service. I get this info long before I'm in range of local stations.
